About This Game

Dig, discover, design, deploy, and defend. Explore your very own planet, and eventually help conquer or help build up the planets of others.

What is Metaverse?

Metaverse is a voxel based action/adventure (Sci-Fi!) game about digging, discovering, designing, deploying, and defending. But we see it as more than a game. Metaverse is an ever-evolving platform, shaped by the actions of its players. Right now that involves players giving feedback about the direction of development. Before long, players will have a much more direct role in how Metaverse shapes up by traveling to the planets of other players and by trading and selling their fabrications. Fabrications are custom objects that can be created in-game by players, using the materials harvested from their planet. See below for more details.

What can I do in Metaverse right now?

[Story](#)

Metaverse has what we believe to be an awesome storyline. Of course, we *would* say that! So we'll let you be the judge. Tell us what you think so we can make improvements, create story branches, or even change its entire direction. We're excited to build this thing with you! We've built out the first chapter of the story in the form of a tutorial. If you rush through and don't stop to smell the roses or explore, there's about 25-30 minutes of playable story in the game right now.

Sandbox Mode

After the tutorial, you're dropped straight into sandbox mode. In this mode, you can explore your planet. This is also where you can dig and create (though a major component of creating is also found in Metaverse's Fabricator). Because of the technical challenges involved with setting up procedural terrains otherwise, most voxel based games offer only either completely cubed geometry or completely rounded geometry. Metaverse, being a simulation from the future, has cracked the code, and is able to beautifully combine the two in a way that makes logical sense! The procedurally generated planet that currently ships with Metaverse is 300 Km in diameter, which is indeed very big. For now, let's just call it, "New Texas." If you were to run in a straight line without stopping, we estimate it would take you about 28 hours to completely circle the planet. Metaverse does not have biomes right now, but that is a planned feature, and we've already done a lot of the development work needed to support that. You tell us what's most important to you, and that's where we'll focus development!

Fabricator

In the Fabricator, you can process the raw resources you've collected from your planet into refined materials. Using these refined materials in the Simulation mode of the Fabricator, you can create just about anything you want. And as long as you've got enough refined resources for the elements you've used, you can fabricate it into an actual object that can be taken outside to your planet and deployed. Elements in the fabricator are based on real periodic table elements, and have accurate densities. So if you make the walls of your base out of titanium, they're going to be significantly stronger than if you had made them with clay.

What are the limitations right now?

Metaverse *is* Early Access, so there will be bugs. We're working hard to sort these out, and with your help, will stomp out the ones that are most important to you as quickly as possible. And if you find something lacking, we want to hear about it!

Is Metaverse under active development?

Yes, very much so! Metaverse is now a full time project, *not* an on-the-nights-and-weekends project!

I have an idea for Metaverse!

Great! We want to hear it! Please head over to the [Metaverse discussion forums](#) and let your voice be heard. Metaverse is a game meant to be directed by its community. That's why we're releasing as Early Access, after all!

I found a bug!

Great! Please do us a favor and send an email to support@jointhemetaverse.com. That will get your bug into our help desk software and allow you to track its status as we work to fix it.

Metaverse exists to be the exemplification of the democratization of knowledge and thereby the dissemination of power, primarily through the novel exploitation of computation through collaboration within simulation.

Title: Metaverse
Genre: Action, Adventure, Indie, RPG, Simulation, Early Access
Developer:
Metaware Limited, LLC
Publisher:
Metaware Limited, LLC
Release Date: 5 Apr, 2016

a09c17d780

Minimum:

OS: Windows Vista (SP2), Windows 7, Windows 8

Processor: Intel Core 2 Duo, AMD Athlon X2, or equal at 2.0 GHz

Memory: 2 GB RAM

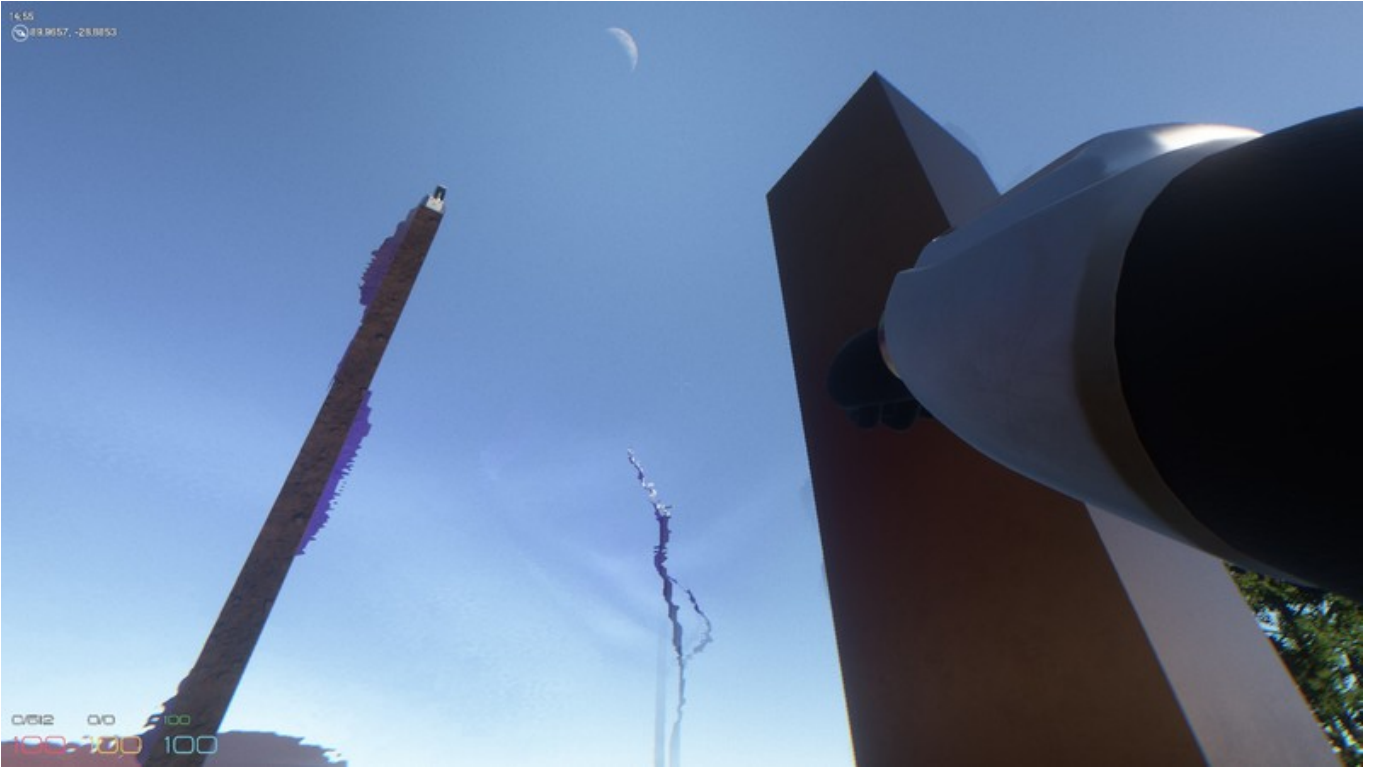

Graphics: DirectX 9.0c-compatible, SM 3.0-compatible, 256MB VRAM

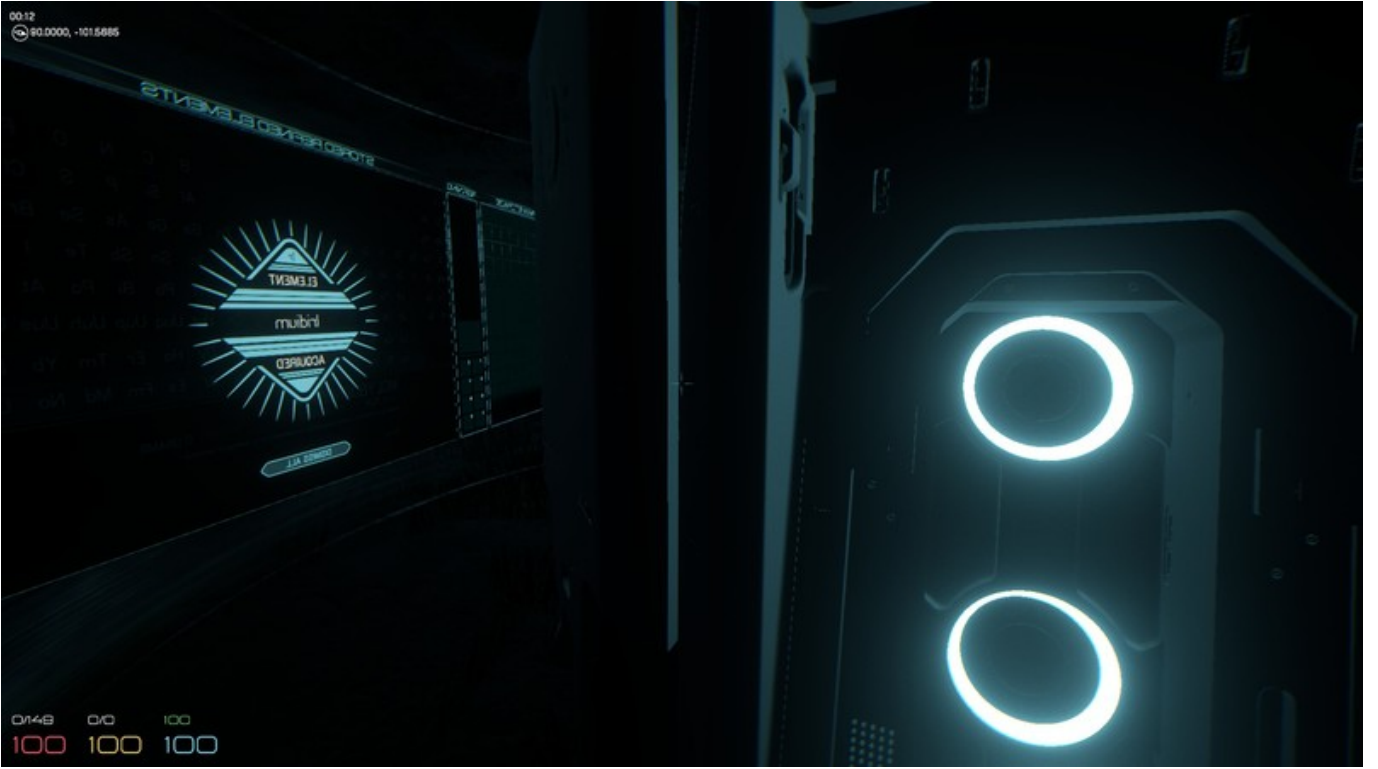

DirectX: Version 9.0c

Storage: 1 GB available space

Sound Card: DirectX 9.0c-compatible, 16-bit

hi guys

now for a pre alpha game this is amasing , seriously the devs are working hard and actively updating, gamplay fundamentals are all there and this game is going to be epic crafting is unique and interesting graphics are smooth and colorful and i will be in regular contact with the devs to make sure this game lives up to its potential this will be amasing

think destiny crossed with minecraft with everything else youve ever wanted from a game (some bits are still in developepment) as long as we get to travel to other planets this game will be perfect. Not ready to be played yet. (28.01.16)

And the creator is not updating the thing.. This needs a lot more time. not sure if that will make it good, but playable, I would hope.

cause now it ain't. Gambled and lost. Scammed again.. The Developer has not worked on this game in a LONG TIME! It still has a bunch of bugs!

I have wasted three hours of my life playing this game. I believe the game just isn't worth playing.. Great Game! Yes there are some bugs, but it is a work in progress and it's coming along nicely. I would recommend this game if you like sci-fi survival basebuilding games.. This game is pretty fun so far!

cant wait when its finished. This game is why I love early access games. You get to see the transformation of a great idea into an awesome game.

Pros:

- Amazing graphics for an indie game
- Loads of fun making and tailoring your own buildings.
- Falling through the world into an unknown wonderland.
- Scale of the world.

Cons:

- Handful of buggs here and there.
- Jumping up on different blocks can be a little stressful at time.

I'm really looking forward to see how this game evolves and develops.

Definitely worth picking up and trying out for yourself.

. Just got this game and can't play because they have decided to take the HUD out . Spent a while playing tutorial thinking it would give me HUD but no..... Get this sorted please or you have an unplayable game . I DO NOT RECOMEND this game at this time

Edit: Thanks Vox , I will wait for HUD then I will comment again

HUD is back but it doesn't do anything or show anything , needs a better tutorial ,

Game is complete waste of a good idea at the moment come on DEVS give a decent tutorial and a better hud that shows something

NOT WORTH THE MONEY

Edited on 12/5/15

Thought I would try this game again after update and still I can only say DO NOT WASTE YOUR MONEY . This game is no where near being worth the price basically a building game with lots of blocks made out of diffrent materials and very boring map to build on

Edited on 26/08/15

Just played with new update . Terrain is looking better in fact everything looks better but that doesn't make up for the fact that there is nothing to do because they have basically gone backwards and you can't do anything in the game apart from walk around build a few blocks and dig . Let's wait for next update .

Edited on 03/06/2016

DO NOT BUY THIS GAME A COMPLETE RIPOFF . No updates for months , updates go backwards and make game worse , graphics are garbage , gamplay is garbage a dead game with no future. Ok, where to begin?....ah yes It's Minecraft, oh wait no it isn't, or is it? WHO CARES?

This game is in alpha and the devs are highly active from what I see. Bought this on Mac because they said it "Should" run ok on normal, they were right.

Basically The Universe ended due to some anomaly, Humans have mastered time control some how and have created the "Metaverse" A Time Displacement in which there are Infinite Universes apparently....which is AWESOME

Building = Pain in the♥♥♥♥♥right now

mining = works fine

Drones = Flying ♥♥♥♥♥s

Player = works great

doors = absent because they're adding Mechanical B.I.T.S.

Looks = 800x600 - 1920x1080 (DO NOT try that last on a macbook) Looks beautiful

Tedium = no more than minecraft or any other building game

Multiplayer = issues because it's all in alpha which is ok

There's a lot of room for polish here, and they actually WORK ON THE GAME unlike some OTHER building spacey games (YES I'm LOOKING AT YOU STARFORGE)

Bottom Line --> BUY THIS IF: You like building, You like Minecraft or Infiniminer, Love Alphas and shaping the future, You like Sci-Fi

Don't buy if: You hate and can't deal with bugs, it's just not your "Thing". the game was fun but confusing at times.it didn't give enough help or instruction.it was pretty fun but don't get it unlessyou really want ityou art.i think he price was to high for what was there so don't get it if you are looking far a random game.alsoget metaverse construction kit.
